# RECOMMISSIONING YOUR EQUIPMENT?

**Are you getting your coffee machines, water coolers or hot water products ready for use after a short break?**

We have put together a series of handy guides to help you recommission any of your beverage equipment after a short gap in use.

If you require an engineer to visit to give your equipment a valet clean, recommission and a check please call Liquidline Customer Service Team **0800 849 9110** or email [service@liquidline.co.uk](mailto:service@liquidline.co.uk).

We shall direct your request efficiently

and you will receive a call back from our Technical Help Team within just 30 minutes to plan for your engineer visit.

Our fully trained and qualified engineer will carry out all the work listed below, to ensure your equipment is hygienic, correctly setup and ready for the very first person to enjoy their beverage.

We shall practice social distancing and use the appropriate PPE and use the appropriate cleansing products.

**ORDER NOW! VISIT [LIQUIDLINE.CO.UK](http://LIQUIDLINE.CO.UK)**

IF YOU NEED HELP WHEN DECOMMISSIONING OR RECOMMISSIONING OF YOUR MACHINE, PLEASE CALL LIQUIDLINE CUSTOMER SERVICE LINE **0800 849 9110** OR EMAIL **[SERVICE@LIQUIDLINE.CO.UK](mailto:SERVICE@LIQUIDLINE.CO.UK)**

# RECOMMISSIONING FRESH MILK COFFEE MACHINE FOLLOWING A SHORT GAP IN USE.

To get your fresh milk coffee machine up and running after a short gap in use simply follow the guide below

This broad guide covers a multitude of machine types that have fresh milk within the machine and the associated fridge.

Please carry out the below prior to using the machine which will prevent any unwelcome odours and build-up of bacteria, plus will flush through any water that has been sat beyond the filter.

- Open the fridge and clean the milk container and tubing. You may need to soak the container and any milk tubes and nozzles for a few hours in a milk **cappuccino cleaning product** to remove dried milk residue. Ensure you rinse in clean water prior to use.

- If your fridge has been left off for a period of time then you may wish to leave the door open for a short period to remove any odour.
- Place the container back in the fridge.
- Power on the fridge (only)
- Open the machine and remove any instant powder canisters, like chocolate, and dispose of the remaining powder. Gently tap the canister to ensure all the product is removed.
- Fit the canister back in the machine.
- After locking the bean hopper to prevent any beans being dropped,

remove the bean hopper and dispose of any old beans. Note: Do not try and keep the beans as these will not be of any use after approximately one week of being open to the air.

- Refill the machine with fresh Liquidline beans, ensure the bean hopper lock is open.
- Refill the instant canister with fresh Liquidline chocolate powder.
- If the machine is a plumbed in machine you can now turn on the water supply.
- If your machine is a manual fed machine, then first rinse out the tank and refill water tank with fresh water, finally insert tank in the machine.
- Power on the machine, you may find the machine has a separate power button (consult the manual)
- Carry out a full espresso and instant whipper bowl clean. Use a \*cleaning tablet if your machine asks this during the process.
- Carry out a routine milk clean or milk flush as stated in the machines guide.
- Remove the drip tray and coffee waste bin from the machine and wash them out with washing up liquid or similar.
- Refit the tray and the coffee waste bin and give the machine a final **hygienic wipe**.

# RECOMMISSIONING POWDERED MILK COFFEE MACHINE FOLLOWING A SHORT GAP IN USE.

Follow our handy guide to get your powdered milk coffee machine up and running after a short gap in use

This broad guide covers a multitude of machine types that have instant milk within the machine.

Please carry out the below prior to using the machine which will prevent any unwelcome odours and build-up of bacteria, plus will flush through any water that has been sat beyond the filter.

- Open the machine and remove any instant powder canisters, like chocolate and instant milk and dispose of the remaining powder... gently tap the canister to ensure all the product is removed.
- Fit the canisters back in the machine.
- After locking the bean hopper to prevent any beans being dropped, remove the bean hopper and dispose of any old beans. Note: Do not try and keep the beans as these will not be of any use after approximately one week of being open to the air.
- Refill the machine with fresh Liquidline beans, ensure the bean hopper lock is open.
- Refill the instant milk container with fresh Liquidline milk product.
- Refill the instant canister with fresh Liquidline chocolate powder.
- If the machine is a plumbed in machine you can now turn on the water supply

- If your machine is a manual fed machine, then first rinse out the tank and refill water tank with fresh water, finally insert tank in the machine.
- Power on the machine, you may find the machine has a separate power button (consult the manual)
- Carry out a full espresso and instant whipper bowl clean. Use a **cleaning tablet** if your machine asks this during the process.

# RECOMMISSIONING PLUMBED-IN BILLI OR ZIP TAPS FOLLOWING A SHORT GAP IN USE.

Not been using your water tap for a while? This guide will help you get it running after a short gap in use.

This broad guide covers all tap types.

Please carry out the below prior to using the tap or machine which will prevent any unwelcome odours and build-up of bacteria, plus will flush through any water that has been sat beyond the filter.

- Turn on the water supply to the machine, usually a small blue tap is located either behind the cooler or next to the filter which could be in the base of the machine or cabinet.
- Power ON the main unit at the mains socket.
- The machine should automatically purge water through the system.
- Wait until the machine is fully heated (on hot and cold models)
- Flush approximately 4 litres of cold water via the tap.
- Flush through the hot water until the tap runs dry, then repeat this once the equipment resets. Try and flush through

3 litres of hot water. **Be very careful this is very hot water**

- Remove the drip tray or cup stand (if fitted) and clean them using a sanitising wipe or spray.
- Spray and wipe the tap(s) with an antibacterial spray that is safe for drinking water contact points
- Clean the chiller and boiler exterior panels with an **antibacterial wipe**.

# RECOMMISSIONING PLUMBED-IN WATER BOILERS FOLLOWING A SHORT GAP IN USE.

Want to know how to get your hot water boiler up and running following a short gap in use? Our handy guide will give you all the information you need.

This broad guide covers a multitude of plumbed-in boiler types that are standalone water boilers.

Please carry out the below prior to using the machine which will prevent any unwelcome odours and build-up of bacteria, plus will flush through any water that has been sat in the pipework.

- Turn on the water supply to the machine, usually a small blue tap or mains water shut off valve is close

to the boiler.

- If your machine has taps or paddles, then you can drain down the tank, place a jug under the taps and simply hold the tap down until the water stops running out the nozzle any longer. **Be careful the water could be hot.**
- Power ON the boiler at the mains socket.
- Let the tank of water heat up for 10 – 15 minutes
- Once to temperature, flush through

approximately 1 litre of water into a jug.  
**Be careful the water could be hot.**

- Remove the drip tray from the machine (if fitted) and empty the contents and wash the tray in soapy water.
- Refit the drip tray.
- Clean the external panels with a suitable *antibacterial wipe*
- Spray the nozzles, buttons and drip tray with an antibacterial spray that is safe for drinking water contact points.

# RECOMMISSIONING BOTTLE WATER COOLERS FOLLOWING A SHORT GAP IN USE.

Follow our handy guide to get your bottle water cooler up and running after a short gap in use.

This broad guide covers a multitude of machine types that are bottled water coolers.

Please carry out the below prior to using the machine which will prevent any unwelcome odours and build-up of bacteria, plus will flush through any water that has been sat dormant.

- Remove the existing bottle from the machine by pulling it sharply up, the bottle should not leak, place to one side do not reuse this.

- Power ON the cooler at the mains socket.
- If your machine has taps or paddles, then you can drain down the tank, place a jug under the taps and simply hold the cold tap down until the water stops running out the nozzle any longer.
- Clean around the cone of the cooler with an antibacterial wipe.
- Fit a fresh bottle to the cooler, please ensure the paper label is removed from the bottle nozzle first.

- Hold a jug under the nozzles and flush a cup or two through the nozzles.
  - Remove the drip tray from the machine and empty the contents and wash the tray in soapy water.
  - Refit the drip tray.
- 
- Clean the external panels with a suitable *antibacterial wipe*
  - Spray the nozzles, buttons and drip tray with an antibacterial spray that is safe for drinking water contact points.

# RECOMMISSIONING PLUMBED-IN WATER COOLERS FOLLOWING A SHORT GAP IN USE.

Our simple guide will show you everything you need to do to get your plumbed-in water cooler back up and running after a short gap in use.

This broad guide covers a multitude of machine types that are plumbed in water coolers.

Please carry out the below prior to using the machine which will prevent any unwelcome odours and build-up of bacteria, plus will flush through any water that has been sat beyond the filter.

- Turn on the water supply to the machine, usually a small blue tap is located either behind the cooler or next to the filter which could be in the base of the machine.
- Power ON the cooler at the mains socket.
- If your machine has taps or paddles, then it will automatically fill the tank, at the same time place a jug under the tap(s) and press to empty water into the jug. Approximately 1 litre of water will be the correct flush.
- If your machine has buttons or a touch panel then you will need to flush water through the nozzle up to around 1 litre. To do this place a jug under the nozzle and press the cold water button and keep held down.

- Remove the drip tray from the machine and empty the contents and wash the tray in soapy water.
- Refit the drip tray.
- If your cooler has a large waste vessel in the base, then empty this and clean as above, then refit
- Clean the external panels with a suitable *antibacterial wipe*
- Spray the nozzles, buttons and drip tray with an antibacterial spray that is safe for drinking water contact points

# THE SAFER SOLUTION TO ENJOYING GREAT COFFEE IN SHARED ENVIRONMENTS

## Upgrade your coffee offering with contactless drinks

The impact on society from COVID19 will see more staff home working and more people conscious of hygiene. That's why we now have a contactless upgrade available for the Schaefer Coffee Club to be hands-free - the coffeeMysation app.

### ABOUT THE APP

Operate the coffee machine from your smartphone with the coffeeMysation app. Create your favourite coffee in the app and start the process from there. Remember you can save your favourite drink, so it is ready to go for next time.

- Place your cup under the dispenser
- Use the app to choose a drink
- Watch your drink dispense
- Voila! Contactless coffee
- Enjoy the added benefits of telemetry reporting for monitoring use.

### HOW DOES IT WORK

- Liquidline will install and configure a new module inside the coffee machine that connects with your smartphone via bluetooth
- Download the free app and connect
- Place a cup, choose a drink and press Go!
