

Liquidline Q2 Fresh Milk

Bean to Cup Coffee Machine

Compact and user-friendly, the Liquidline Q2 combines freshly ground coffee and foamed milk to deliver an impressive selection of hot refreshments. Easy to maintain without compromising on taste, it is the perfect solution for smaller commercial spaces.

Liquidline

Q2 Fresh Milk

Developed with advanced brewing technology, the Liquidline Q2 Fresh Milk machine is an all-in-one coffee solution that boasts a range of features, serves your favourite drinks options and has a capacity of up to 150 cups per day. A key asset for any smaller organisation looking to boost engagement with customers and teams.

MICRO INJECTED AIR TECHNOLOGY

With Micro Injected Air Technology, the Q2 Fresh Milk achieves barista-quality drinks with delicious hot milk foam at the touch of a button. The system injects high pressure air into the milk to create millions of bubbles coated with casein, the most important component when developing a velvety, milky texture.

EFFORTLESS MAINTENANCE

Featuring a fast and user-friendly cleaning process, caring for your Q2 Fresh Milk machine is easy and convenient. After each drink, the Q2 automatically releases pressurised water through the pipes to remove any traces of milk inside.

DISTANCE TOUCH SELECTION

Safety and hygiene are paramount when sourcing a communal refreshment machine. With Distance Selection Technology, the Q2 Fresh Milk enables users to select a drink by hovering their finger above the surface of the machine.

ENERGY EFFICIENT

Unlike other fresh milk machines, the Q2 Fresh Milk doesn't have a pressurised vessel. Not only does this eliminate the need for an annual PSSR test and additional insurance, but you'll also save money on your electricity bill, as the Q2 is far more energy efficient.

“

With the Liquidline Q2 Fresh Milk, you can achieve barista-style drinks with delicious hot milk foam at the touch of a button.”
